XM satellite radio is one of the fastest growing forms of Radio. To try to limit XM from broadcasting the Traffic and Weather information is ridiculous. XM radio is a pay service and since I am paying for it the NAB should not be able to limit what I can listen to on XM. I have been using the traffic station since the day it came out and have benifited from it greatly. It has kept me out of many traffic jams without having to go back to my FM radio tuner then back to my XM tuner once I find out what the traffic is. I would urge the FCC to reject petition 04-160. The quality of XM and the services that XM offers should not get dictated by the National Association of Broadcasters. Thank you for your time.
